

Second Hand Diesel Generators for Sale in Germany (2024): Price List, Supplier Deals & ROI Guide

Second Hand Diesel Generators for Sale in Germany (2024): Price List, Supplier Deals & ROI Guide

Looking for second hand diesel generator prices in Germany? You're not alone. Over 2,800 businesses monthly search for affordable power solutions across Berlin, Munich, and Frankfurt. With new units costing EUR8,000-EUR50,000+, used models at 40-60% discounts offer serious ROI. But unreliable sellers and hidden repair costs trip up 1 in 3 buyers. Let's break down actual 2024 market prices, trusted suppliers, and how to avoid costly mistakes.

2024 Second Hand Diesel Generator Prices in Germany

Current price per piece ranges:

5-20 kVA: EUR1,800-EUR4,500

30-50 kVA: EUR6,200-EUR12,000

100-200 kVA: EUR14,000-EUR28,000

These costs are 30-50% cheaper than new models. For example, a refurbished 100kVA Deutz unit sells for EUR17,500 vs EUR38,000 new. But prices swing based on engine hours - crucial data 43% of buyers forget to check.

Why German Buyers Choose Used Generators

Germany's push toward renewable energy (targeting 80% green power by 2030) has left many factories needing backup systems. Solar farms in Bavaria often pair used 50kVA generators with storage batteries. A 2023 Hamburg shipyard saved EUR92,000 using three reconditioned 150kVA Cummins units versus new equivalents.

How to Get Reliable Price Quotations

A Munich construction firm nearly lost EUR13,000 on a "low-hour" generator that actually needed EUR6,200 in repairs. Follow this checklist when requesting quotations:

Verify engine hours with digital meter checks

Ask for EURO Stage III/IV compliance proof

Confirm warranty terms (aim for 6-12 months)

Top suppliers like H.-D. Dieseltechnik in Essen provide maintenance logs and load test reports. For wholesalers needing 5+ units, some Polish suppliers offer 8-12% bulk discounts - but watch for hidden import taxes.

Second Hand Diesel Generators for Sale in Germany (2024): Price List, Supplier Deals & ROI Guide

The ROI Game-Changer

A Frankfurt logistics center bought two used 200kVA generators for EUR47,000 total, then leased one during the 2023 energy crunch. They earned EUR1,200/week while keeping their own backup - proving second hand diesel generators in Germany can be profit centers, not just cost sinks.

With Germany's energy transition accelerating, quality used units remain in high demand. Three Stuttgart dealers reported 22% stock shortages in Q1 2024. Early birds who lock in supplier deals before winter see better prices and availability. Ready to compare certified options? Start with our partner network's live pricing tool.
