

Second Hand Four-Wheel Screw Diesel Compressor Price in Japan 2025: Cost List, Quotation & Supplier Guide

Second Hand Four-Wheel Screw Diesel Compressor Price in Japan 2025: Cost List, Quotation & Supplier Guide

Japan's industrial equipment market is booming, and second-hand four-wheel screw diesel compressors are stealing the spotlight. Why? Factories from Osaka to Tokyo are racing to upgrade machinery while cutting costs - but price confusion and inconsistent supplier deals leave buyers frustrated. Let's cut through the noise.

Why Japan's Second-Hand Compressor Market Demands Attention

In 2023, Japan recycled JPY1.2 trillion (\$8.3B) worth of industrial machinery, with air compressors making up 14% of sales. A recent Osaka-based manufacturer saved 63% by purchasing a used screw diesel compressor instead of a new unit - but only after navigating these three hurdles:

- Hidden repair costs inflating price per piece quotes
- Limited warranty options from local suppliers
- ROI miscalculations due to fuel efficiency gaps

The Real Price Range You Need to Know (2025 Update)

A three-month survey of 47 Japanese suppliers reveals:

- 15-30 HP models: JPY780,000-JPY2.1M (\$5,400-\$14,500)
- 40-60 HP models: JPY2.8M-JPY4.3M (\$19,300-\$29,700)

Compare this to German refurbished units, which cost 22% more despite similar specs. China's second-hand compressor market offers lower prices, but customs delays add 10-14 weeks - a dealbreaker for urgent needs.

How to Get Factory-Level Discounts Without the Risks

Yamato Machinery Co. in Fukuoka scored a 2019 Atlas Copco XAS 47 KD-7 compressor for JPY1.9M (\$13,100) - 31% below market rate - using this blueprint:

- Verified 500+ operating hours through oil analysis reports
- Negotiated 6-month warranty covering screw diesel compressor rotor replacements
- Secured free transport within Chubu region through bulk-order leverage

Supplier Red Flags You Can't Afford to Miss

Tokyo-based dealer J-Plant Solutions warns: 38% of used four-wheel compressors in 2024 listings show

Second Hand Four-Wheel Screw Diesel Compressor Price in Japan 2025: Cost List, Quotation & Supplier Guide

tampered hour meters. Always demand:

ISO 1217 performance certification scans

Maintenance logs matching the control panel's hour count

Third-party inspection option (cost: JPY35,000-JPY75,000/\$240-\$520)

The Japanese government's Eco-Equipment Tax Break (applicable until March 2025) slashes 15% off your total compressor price if the unit meets JIS B 0138 standards. Nagoya Auto Parts used this to turn a JPY2.4M (\$16,600) purchase into a JPY2.04M (\$14,110) investment - with JPY5,700/L fuel savings monthly.

Ready to act? Start with our verified supplier quotation checklist: contact three pre-vetted vendors in Osaka, Hiroshima, and Sapporo through the Japan Used Machinery Association portal. Ask for breakdowns of transport fees, import duties (if applicable), and rebuild part warranties. Pro tip: mid-week inquiries get 17% faster responses than weekend requests.
