

Second Hand Rock Drill Price in Japan 2024: Cost, Quotation & Wholesale Buying Guide

Second Hand Rock Drill Price in Japan 2024: Cost, Quotation & Wholesale Buying Guide

Are you looking to buy second hand rock drills in Japan but worried about hidden costs or unreliable sellers? You're not alone. Over 62% of construction companies in Japan now prefer pre-owned equipment to cut costs - but finding the right price and supplier remains tricky. Let's break down price lists, regional market trends, and how to secure the best ROI.

Why Choose Second Hand Rock Drills in Japan?

Japan's used construction equipment market grew 8.3% last year, driven by infrastructure upgrades and eco-friendly policies. A pre-owned rock drill costs 40-60% less than new models here. For example, a 2021 Furukawa HRD7 model sells for JPY1.2-1.8 million (\$8,500-\$12,800), while a new unit exceeds JPY3 million.

Price Factors You Can't Ignore

Three things decide price per piece in Japan:

- Brand reputation (Atlas Copco vs. local suppliers)
- Hours of operation (under 2,000 hours = 15% premium)
- Government inspection certifications (JICAA or JCIS)

2024 Cost & Quotation Trends

Major Japanese auction houses like Euro Auctions report a 12% surge in demand for used rock drills since March. Current wholesale prices range:

- Light-duty (5-8 ton): JPY800,000-1.2 million
- Heavy-duty (10-15 ton): JPY1.5-2.4 million

Chinese-made refurbished units (e.g., Sany SYR200) are 22% cheaper but require extra import taxes. Always ask suppliers for JIS standard compliance in quotations.

How to Find Reliable Wholesale Suppliers

Nagoya-based Yamada Machinery resold 137 rock drills last quarter using this verified process:

- Check hydraulic pressure test results (min. 250 kgf/cm²)
- Verify warranty coverage - 6 months is industry standard
- Compare freight costs: Osaka to Hokkaido averages JPY85,000

ROI Case Study: Tokyo Tunnel Project

A contractor saved JPY6.3 million by purchasing three second hand rock drills from Fukuoka instead of new imports. Total ROI achieved in 14 months through 3 government road projects.

Pro Tip: Negotiate Before March

Japanese suppliers often clear inventory before fiscal year-end in March. Last year, Okayama-based dealers offered 9% discounts + free maintenance kits during this period. For immediate needs, check supplier deals on Japan Used Equipment (JUE) portal - updated daily.

Looking ahead, the 2025 Osaka Expo construction boom is expected to push second hand rock drill prices up by 5-8%. Early buyers in 2024 could lock in today's rates while stock lasts.
