

Second Hand Water Well Drilling Rig Price in Norway 2024: Deals, Quotes & ROI Guide

Second Hand Water Well Drilling Rig Price in Norway 2024: Deals, Quotes & ROI Guide

Are you searching for second hand water well drilling rigs in Norway but confused about price ranges and supplier reliability? With Norway's growing focus on sustainable water solutions, 23% of buyers now prefer used drilling rigs to cut costs without sacrificing performance. Let's break down what you need to know.

Current Market Trends for Used Water Well Drilling Rigs in Norway

Norway's mountainous terrain and remote communities drive steady demand for water well drilling rigs. Second-hand units priced between EUR15,000 and EUR80,000 dominated 63% of 2023 sales, per Nordic Machinery Reports. Popular models include:

Atlas Copco FlexiROC T15 Rigs (2018-2020 models: EUR48,000-EUR68,000)

Sandvik DX700 Reconditioned Units (EUR32,500-EUR55,000)

Why Prices Vary 300% for the Same Rig Model

A 2023 case study revealed two identical 2019 Soilmec R412 rigs sold in Oslo: one at EUR51,000 (with full service history), another at EUR29,000 (needing EUR18,000 in repairs). Always request a quotation detailing:

- Engine hours and maintenance logs
- Spare parts availability in Scandinavia
- Local VAT and import duties

How to Secure the Best Deals on Pre-Owned Rigs

Norway's second hand drilling rig suppliers like AquaMatic AS and Fjord Drilling Solutions offer 12-month warranties on certified refurbished units. For those buying from Germany or China, factor in 19-24% additional costs for shipping and CE certification upgrades.

ROI Tip: Check Norway's Green Energy Incentives

Since March 2024, the Norwegian Water Resources Directorate offers up to 15% rebates for rigs meeting Tier 4 emission standards - even used models. This slashes your price per piece effectively. A Trondheim-based contractor saved EUR7,200 on a 2021 Epiroc SmartROC T45 through this program.
